

SITEDIM

AR Jobsite Quantity Survey

PressKit

Version 1.3 (build 82) — September 2026

JDG inc. — Québec, Canada
<https://apps.apple.com/app/site-dim/id6807966608>

ABOUT

Quantity surveying, simplified

SITE DIM turns your iPhone or iPad into a jobsite quantity-survey tool. No more tape measure or manual calculations: aim, tap, and the app calculates the area for you — right on site.

How it works

Unlike standard measuring apps that only give you a distance, SITE DIM traces a complete polygon in augmented reality and automatically closes the shape to calculate a real area, ready to drop into your quotes and estimates. Every survey type adds up into a final table: total area, perimeter, linear lengths, and excavation volumes — exportable to CSV.

LiDAR precision

On iPhones with a LiDAR sensor, SITE DIM uses the scene's 3D mesh for reliable point placement even at a distance — a level of accuracy standard measuring apps don't offer.

WHAT YOU CAN MEASURE

Six survey types

Wall Wall area, with openings (doors, windows) automatically subtracted.	Floor Floor area of a room, even an irregular shape.
Ceiling Ceiling area, captured in the same pass as the walls or via LiDAR Scan.	Roof Slope × façade calculation, measured safely without walking the whole roof.
Linear Trim, baseboards, and other lengths, with optional height measured in AR.	Land Full topographic survey: perimeter, interior points, excavation volume calculated from depth and a reference point, with a 3D render of the existing lot and the planned excavation.

CAPTURE

Four modes matched to the real shape of the space

Rectangle For rooms and surfaces with right angles — the fastest mode.	Circle For circular surfaces, columns, and rounded elements.
Half-moon For semi-circular surfaces and composite shapes.	Full trace For capturing any irregular shape, point by point.
Automatic corner squaring Every captured corner is squared automatically, no manual adjustment needed.	LiDAR Scan A single room scan automatically detects walls, floor, and ceiling.

WHAT'S NEW — VERSION 1.3

New: LiDAR Scan

Survey a wall, floor, and ceiling in a single pass: walk around the room with the camera, and SITE DIM automatically detects the walls, floor, and ceiling, ready to be added to your surveys (requires a device with a LiDAR sensor).

- QR code and share button added to the main menu to quickly refer the app to a colleague
- Land survey: fixed missing perimeter and plan view/export for large lots
- Various stability fixes

WHY SITE DIM

The advantages, at a glance

Measured in seconds A whole room surveyed far faster than with a tape measure.	Instant calculation Areas and volumes obtained immediately, no manual math afterward.
One single pass Walls, floors, and ceilings captured in a single visit.	Automatic corner squaring Corners are squared automatically, eliminating a common source of angle error.
Measure alone No need for a second person to hold the other end of the tape.	One device does it all An iPhone replaces a tape measure, laser theodolite, and jobsite notebook.
Full-page PDF export A document ready to share with a client, subcontractor, or supplier.	Metric and imperial together Both systems displayed at once, no manual conversion.
Fewer ordering errors Reliable areas and volumes reduce material ordering mistakes.	Bilingual from day one The app is fully available in French and English.

TECH SHEET

App information

PUBLISHER	JDG inc., Québec, Canada
BUNDLE ID	JDG-inc.SiteDim
VERSION	1.3 (build 82)
REQUIREMENTS	iOS 17+ — iPhone or iPad with a LiDAR sensor
LANGUAGES	French, English
UNITS	Metric and imperial, shown together
EXPORTS	Full-page PDF, vector DXF (AutoCAD-compatible), CSV
PRICE	CAD \$44.99

AVAILABILITY

App Store — apps.apple.com/app/site-dim/id6807966608
